

G4

ADVANCED
TECHNOLOGICAL,
AQUATIC FEATURES

RUDDER

A central part of the ZODIAC G4's construction, has a unique steering function that allows for better balance, directional stability and enhanced coverage for thorough cleaning.

HULL

A structurally rigid component which houses the Diaphragm and provides the chassis to which key components are fastened.

SAIL

Transparent bridge that provides extra rigidity and assists in steering around steps, corners, and other pool obstacles. The Sail creates a "down-draught" effect for maximum adhesion and coverage. The Sail is clearly made of materials designed to last longer in the harsh chemical environment of your swimming pool. Its unique translucent effect was engineered to resist fading.

DIRECTIONAL GILLS

(underneath)

Keep the G4 on track as it funnels debris.

FINS

Designed to allow the G4 to climb over main drains, lights, and return fittings without getting stuck.

BUOY AND KEEL (inside)

Work in combination to provide balance for precise flotation and proper attitude for consistent cleaning.

FENDER

Protects the G4 from pounding, and shaking as it moves across the pool bottom in much the same way a fender protects marine vessels.

PATENTED LONG-LIFE™ DIAPHRAGM (inside)

The Zodiac G4's only operational moving part ensures peak performance, maximum power and low-cost maintenance. If it should ever need service, its patented Quick Release Cassette lets you remove it, service it yourself or replace it poolside.

CONTACT PAD

(underneath)

Monitors Disc performance.

DUAL DUROMETER DISC

The co-injected Disc works in combination with the Sail to provide the ultimate in cleaning efficiency. The Disc's skeletal structure has been designed to maximize the cleaning action, and was created to provide optimal adhesion, while its pliable inserts scrub your entire pool's surface.
